Description	Hours	Rate INR	Total
Psp-464: after matomo plugin install open tracking was not working and it was due to restrictions in tracking logic. It was blocking the requests and treating every request as automated requests. Fix this as hotfix on production 2. Got an request from louie regarding smtp and imap not working. Did the test on my end and was working fine.	3.0	900	2700
PSP-995 -> Update signing secret and backfill missing data from matomo/vector -> in progress PSP-464 -> Completed the testing and updated with development and tested -> In code review PSP-964 -> Merged hotfix into develop and removed the conflicts from the develop branch, tested on local ->testing	3.0	900	2700
PSP-931 -> Working on this one, updated the bugs on my local; some bugs are pending. Due to the database reset, I had to set this again in my local environment. It is all set now and will be completed by tomorrow.  PSP-995 -> Added the webhook secrets and other updates in the vector webhook setup. Will test them and submit PR for all.	3.0	900	2700
PSP-931 -> Fixed the stats discrepancy between the chart and stat boxes - returning visitors and bounced visitors now match correctly. Also improved the chart display: removed scroll,	3	900	2700

better bar spacing, and cleaner tooltips. Getting some issues in the front-end code push (ESLint error ) In Progress			
PSP-931 updated front front-end code in PR it was displaying a lot of issues, and that was a cache issue. resolved all of them and am doing some final testing PSP-653 -> chart page updates . In progress	3	900	2700
	15		
1. Worked on Mailu Server issue with Akshin and collaborated with him on troubleshooting and fixes PSP-931 -> Worked on PR comments and other feedback changes-> completed PSP-653 -> Worked on visitor tables updates. Done locally and doing some final testing to make sure all good. Also, for some reason, Matomo and vector data are not combining, looking into that as well. Because of this Some properties are not pulling up	3.0	900	2700
PSP-931 -> Completed. Fixed some PR comments. It's taking a long time because there are some lint errors in other files that are not related to Site visitor tracking. PSP-653 -> Completed but didn't push code because getting same lint errors that i had for 931 so this can be merged once 931 is merged into main.	3.0	900	2700
PSP-931 -> Sitevisitor hotfixes ( Completed ) PSP-653 -> Sitevisitor hotfix v2 (Completed) I checked why warmup is not working for all emails after optimisation	3.0	900	2700
Tested warmup issue on dev after removing all hard bounce due to the outage in the mail u server, and it's working again now. PSP-995 -> Implemented webhook signing secret in the vector webhook to secure it. PSP-1056 -> Looking into this issue. On local i was't able to replicate, and on dev not able to createa campaign posted in the dev group. Will look into this.	3.0	900	2700
PSP-995 -> Integrated webhook signing secret for vector webhook	3.0	900	2700
	15		
PSP-1056 -> Worked on click event updates and open tracking updates. For testing, doing a local setup with ngrok so we can test this in future as well. Getting some issues with Google on using ngrock url in apps. Will be looking into this.	3.0	900	2700

PSP-1056 -> Worked on click event updates and open tracking updates. For testing, doing a local setup with ngrok so we can test this in future as well. Getting some issues with Google on using ngrock url in apps. Will be looking into this..	3.0	900	2700
PSP-1056 -> Worked on the click and open event for third party via Matomo PR submitted for review. Also tried to set up this whole infrastructure on my local with ngrok, but because we do not have a pro account, it gives a limited number of requests in the free plan, and that is exhausted because we need to run 3 instances (front end, backend and Matomo)	3.0	900	2700
PSP-1056 -> Tested open and click events on dev server. There were some issues in Matomo deployment, fixed all of them, and now it should be working @Louie Solis please test that PSP-1070 -> I am looking into this. SES and Mailu setup is a little complicated and is done by Akber. I need to check and collect all information before changing this for the first time. Looking into this, once I have good information I will rotate them and will make a process moving forward Other than this I got the ngrok subscription and setup local environment with this. Testing the email infrastructure will be easier now.	3.0	900	2700
PSP-993 -> Done. Pr submitted for review PSP-977 -> Done. Pr submitted for review worked on Email infra local setup with webhook and ngrok. Setup is done, and testing email functionalities to make sure it is working well. Also creating a setup guide document so it can be easily set up within a local environment for other developers as well. Other than this worked on tickets PSP-1045, PSP-1056 on testing them on dev server.	3.0	900	2700
	15		
PSP-1070 -> Removed 1 old Key. Checking the usage of others in the project so we can rotate this safely. PSP-993 -> On a small issue in testing with the signup form. The validation message was on page load. Fixed and PR submitted 3. checked the hard bounce email on production due to the outage in the mail server, and provide query to Illia to clear those records. 4. Added visitor tracking script to our build script to generate the script on deployment based on the environment.	3.0	900	2700
PSP-653 -> hotfix for identified visitor count showing 0 on production Pr raised for review PSP-653 -> Add identified lead to other leadpacks - In progress PSP-1056 -> Looking into this issue when some of the	3.0	900	2700

emails are delivered to the wrong email address. replicated on local, working on the fix Deployed and tested the tracking script on production and tested			
	0	0	0
PSP-1109 -> Wrong Recipient to dev sandbox behaviour: with THIRD_PARTY_SANDBOX_MODE=1 and a truthy apolloId, email sending redirects To = campaign owner (user.email), while analytics/UI still shows destination = lead email, creating the mismatch. Verified with DB exports (ActivityFeed.destination + CampaignLeadMailData.emailInbox.to.address). Proposed fix: use actual sent-to address in activity/analytics (or persist recipientEmail) so UI matches delivery. PSP-653 -> a. Worked on the issue with the identified visitor count showing as 0 b. Worked on a missing feature to add an identified visitor to the leadpack.	6	900	5400
PSP-653 -> Tested and hotfix moved to production. Looking good PSP-947 -> created database design for news feed data. PSP-948 -> Integrated the Serper API and tested the integration on local	3	900	2700
PSP-948 -> added Serper API configuration, data, and scheduled event to save the data into tables PSP-931 -> Some translations were missing in the code. Added and raised a hotfix to main.	3	900	2700
PSP-947 -> made some database changes. Completed PR submitted PSP-948 -> Serper API data ingestion done. PR submitted for review PSP-949 -> Content storage is done in the database.	3	900	2700
		<b>Total Due</b>	<b>59400</b>
